WARRANTY STATEMENT

electrical equipment manufactured by WELLS All BLOOMFIELD, LLC is warranted against defects in materials and workmanship for a period of one year from the date of original installation or eighteen (18) months from the date of shipment from our factory, whichever comes first, and is for the benefit of the original purchaser, except that:

- airpots carry a 30 day parts warranty only. a.
- dispensers; i.e., tea and coffee carry a 90 days parts b. warranty only, excludes decanters.

THE FOREGOING OBLIGATION IS EXPRESSLY GIVEN IN LIEU OF ANY OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WHICH ARE HEREBY EXCLUDED.

WELLS BLOOMFIELD, LLC SHALL NOT BE LIABLE FOR INDIRECT, INCIDENTAL OR CONSEQUENTIAL LOSSES FROM ANY CAUSE DAMAGES OR WHATSOEVER.

This warranty is void if it is determined that upon inspection by an Authorized Service Agency that the equipment has been modified, misused, misapplied, improperly installed, or damaged in transit or by fire, flood or act of God.

It also does not apply if the serial nameplate has been removed or unauthorized service personnel perform service. The prices charged by Bloomfield Industries for its products are based upon the limitations in this warranty. Seller's obligation under this warranty is limited to the repair of defects without charge by a Bloomfield Authorized Service Agency or one of its sub-agencies. This service will be provided on customer's premises for non-portable models. Portable models (a device with a cord and plug) must be taken or shipped to the closest Authorized Service Agency, transportation charges prepaid, for services.

In addition to restrictions contained in this warranty, specific limitations are shown below (Additional Warranty Exclusions). Bloomfield Industries Authorized Service Agencies are located in principal cities.

This warranty is valid in the United States and void elsewhere. Please consult your classified telephone directory or your food service equipment dealer; or, for information and other details concerning warranty, write to:

> Service Parts Department Wells Bloomfield, LLC **10 Sunnen Drive** St. Louis, MO 63143 Fax: (314) 781-2714

Phone: (314) 781-2777

SERVICE POLICY AND PROCEDURE GUIDE ADDITIONAL WARRANTY EXCLUSIONS

- Resetting of safety thermostats, circuit breakers, 1. overload protectors, or fuse replacements unless warranted conditions are the cause.
- 2. All problems due to operation at voltages other than specified on equipment nameplates; conversion to correct voltage must be the customer's responsibility.
- 3. All problems due to electrical connections not made in accordance with electrical code requirements and wiring diagrams supplied with the equipment.
- 4. Replacement of items subject to normal wear, to include such items as knobs and light bulbs. Normal maintenance functions including adjustment of thermostats, microswitches, and replacement of fuses and indicating lights are not covered under warranty.
- All problems due to inadequate water supply, such as 5. fluctuating, or high or low water pressure.
- 6. All problems due to mineral/calcium deposits, or contamination from chlorides/chlorines. De-liming is considered a preventative maintenance function and is not covered by warranty.

- 7. Full use, care and maintenance instructions are supplied with each machine. Those miscellaneous adjustments noted are customer responsibility. Proper attention will prolong the life of the machine.
- 8. Travel mileage is limited to sixty (60) miles from an authorized Service Agency or one of its sub-agencies.
- All labor shall be performed during normal working hours. Overtime premium shall be charged to the customer.
- 10. All genuine Bloomfield replacement parts are warranted for ninety (90) days from date of purchase on nonwarranted equipment. Any use of non-genuine Bloomfield parts completely voids any warranty.
- 11. Installation, labor and job check-out are not considered warranty.
- Charges incurred by delays, waiting time or operating 12. restrictions that hinder the service technicians ability to perform services are not covered by warranty. This includes institutional and correctional facilities.

SHIPPING DAMAGE CLAIMS PROCEDURE

NOTE: For your protection, please note that equipment in this shipment was carefully inspected and packaged by skilled personnel before leaving the factory.

Upon acceptance of this shipment, the transportation company assumes full responsibility for its safe delivery. IF SHIPMENT ARRIVES DAMAGED:

- 1.
- VISIBLE LOSS OR DAMAGE: Be certain that any visible loss or damage is noted on the freight bill or express receipt, and that the note of loss or damage is signed by the delivery person.
- FILE CLAIM FOR DAMAGE IMMEDIATELY: 2. Regardless of the extent of the damage.
- CONCEALED LOSS OR DAMAGE: if damage is unnoticed until the merchandise is unpacked, notify the transportation company or carrier immediately, and file "CONCEALED DAMAGE" claim with them. This must be done within fifteen (15) days from the date the delivery was made to you. Be sure to retain the container for inspection.

Wells Bloomfield cannot assume liability for damage or loss incurred in transit. We will, however, at your request, supply you with the necessary documents to support your claim.

INTRODUCTION

Thank You for purchasing this Wells Bloomfield coffee brewer.

Proper installation, professional operation and consistent maintenance of this appliance will ensure that it gives you the very best performance and a long, economical service life.

This manual contains the information needed to properly install this appliance, and to use, care for and maintain or repair the appliance in a manner which will ensure its optimum performance.

| SPECIFICATIONS | | | | | |
|----------------|--|-------------------|------------|------------|----------------------------|
| MODEL | STYLE | VOLTS 50/60 Hz | WATTS | AMPS 1ø | POWER SUPPLY CORD |
| 1016BVM | 3 Warmer Automatic Coffee Brewer with Hot Water Faucet | 120/240 VAC | 3800 watts | 20 amp | NEMA L14-20P Twist Lock |

APPLICABILITY

This manual applies to the following Bloomfield products: 1016BVM $\,$

PRECAUTIONS AND GENERAL INFORMATION

WARNING: Electric Shock Hazard

All servicing requiring access to non-insulated components must be performed by qualified service personnel. Do not open any access panels which require the use of tools. Failure to heed this warning can result in electrical shock.

WARNING: Injury Hazard

All installation procedures must be performed by qualified personnel with full knowledge of all applicable electrical and plumbing codes. Failure could result in property damage and personal injury.

WARNING Electric Shock Hazard

WARNING Brewer must be properly grounded to prevent possible shock hazard. DO NOT assume a plumbing line will provide such a ground. Electrical shock will cause death or serious Injury.

WARNING: Burn Hazard

WARNING This appliance dispenses very hot liquid. Serious bodily injury from scalding can occur from contact with dispensed liquids.

This appliance is intended for commercial use only.

This appliance is intended for use to brew beverage products for human consumption. No other use is recommended or authorized by the manufacturer or its agents.

This appliance is intended for use in commercial establishments, where all operators are familiar with the appliance use, limitations and associated hazards. Operating instructions and warnings must be read and understood by all operators and users.

Except as noted, this piece of equipment is made in the USA and has American sizes on hardware. All metric conversions are approximate and can vary in size.

The following trouble shooting, component views and parts lists are included for general reference, and are intended for use by qualified service personnel.

This manual should be considered a permanent part of this appliance. The manual must remain with the appliance if it is sold or moved to another location.

DO NOT plug in or energize this appliance until all *Installation Instructions* are read and followed. Damage to the Brewer will occur if these instructions are not followed.

Exposed surfaces of the appliance, brew chamber and airpot ,decanter or thermal server may be HOT to the touch, and can cause serious burns.

AGENCY LISTING INFORMATION

This brewer is (\mathbf{U}) and \mathbf{U} listed under UL file 990H.

This brewer meets (NSF) Standard 4 only when installed,

operated and maintained in accordance with the enclosed instructions.

INSTALLATION

READ THIS CAREFULLY BEFORE STARTING THE INSTALLATION

IMPORTANT:

To enable the installer to make a quality installation and to minimize installation time, the following suggestions and tests should be done before the actual unit installation is started:

DO NOT plug in or energize this appliance until all Installation Instructions are read and followed. Damage to the Brewer will occur if these instructions are not followed.

It is very important for safety and for proper operation that the brewer is level and stable when standing in its final operating position. Provided adjustable, non-skid legs must be installed at each corner of the unit. Failure to do so will result in movement of the brewer which can cause personal Injury and/ or damage to brewer.

NOTE: Water supply inlet line must meet certain minimum criteria to insure successful operation of the brewer. Bloomfield recommends 1/4" copper tubing for installation of less than 12 feet and 3/8" for more than 12 feet from a 1/2" water supply line. Unpack the unit. Inspect all components for completeness and condition. Ensure that all packing materials have been removed from the unit.

Verify that the Spray Head Gasket and Spray Disk are properly installed.

LEVELING THE UNIT

Verify that an adjustable leg is installed at each corner of the brewer.

Set Brewer in its operating location. Level the Brewer. A spirit level should be placed on the top of the unit, at the edge, as a guide when making level adjustments.

Level the unit from left to right and front to back by turning the adjustable feet. Be sure all four feet touch the counter to prevent tipping.

PLUMBER'S INSTALLATION INSTRUCTIONS

IMPORTANT:

This equipment must be installed to comply with all applicable federal, state and local plumbing codes and ordinances; specifically:

The Basic Plumbing Code of Building Officials and Code Administrators International, Inc. (BOCA) and the Food Service Sanitation Manual of the Food and Drug Administration (FDA).

Brewer should be connected to a **POTABLE WATER, COLD WATER** line. Flush water line before connecting to Brewer.

DO NOT use a saddle valve with a self-piercing tap for the water line connection. Such a tap can become restricted by waterline debris. For systems that must use a saddle tap, shut off the main water supply and drill a 3/16" (minimum) tap for the saddle connection, in order to insure an ample water supply. Remember to flush the line prior to installing the saddle.

The brewer must be installed on a water line with average pressure between 20 PSI and 90 PSI. If your water pressure exceeds 90 PSI at anytime, a pressure regulator must be installed in the water supply line to limit the pressure to not more than 90 PSI in order to avoid damage to lines and solenoid.

A water shut-off valve should be installed on the incoming water line in a convenient location (Use a low restriction type valve, such as a 1/4-turn ball valve, to avoid loss of water flow thru the valve.

INSTALLATION (continued)

The water line must terminate in a 1/4" male flare fitting, which will connect to the provided flex line. See Figure 2 below.

Fig. 2 Water Supply Installation

In some areas, local codes require a backflow preventer (check valve) to be installed on the inlet water line. If a backflow preventer is used, you must install a *water hammer arrester* in the incoming line, between the backflow preventer and the brewer inlet, as far away from the brewer as space will allow. This will relieve the excessive back pressures that can cause faucet leaks and solenoid malfunctions.

ELECTRICIAN'S INSTALLATION INSTRUCTIONS

REFER TO ELECTRICAL SPECIFICATIONS - Page 1 Check the nameplate to determine correct electrical service required for the Brewer to be installed.

IMPORTANT: Before connecting to electricity, make sure automatic brewers are connected to the water supply.

Model 1016BVM is equipped with a cord and twist-lock plug. It requires a 120/240 volt 30 amp circuit (50/60 Hz, 3 wire plus ground, with NEMA L14-20R Twist-Lock Receptacle).

Brewer must be properly grounded to prevent possible shock hazard. DO NOT assume a plumbing line will provide such a ground. Electrical shock will cause death or serious injury.

IMPORTANT:

Supply power must match nameplate for voltage and phase. Connecting to the wrong voltage will damage the brewer or result in decreased performance. Such damage is not covered by warranty.

IMPORTANT: Do not connect brewer to electrical power until you are ready to fill the tank. See instructions on page 6.

IMPORTANT: The ground prong of the plug is part of a system designed to protect you from electrical shock in the event of internal damage. Never cut off the ground prong nor twist a blade to fit an existing receptacle. Contact a licensed electrician to install the proper circuit and receptacle.

Fig. 3 Brewer Operation Diagram

IMPORTANT:

Tank must be full of water before pressing POWER key "**on**". Heating elements will be damaged if allowed to operate without being fully submerged in water. Damage caused by operating the brewer without water in the tank is NOT COVERED BY WARRANTY.

To Fill Tank, Press BREW—BREW—BREW— CANCEL .

A. START-UP

For initial start-up, or if the brewer has not been used for an extended period of time:

- Be sure spray disk and brew gasket are properly installed in the brew head.
- Be sure the water supply is properly connected and the water supply valve is turned *ON*.
- Be sure the WATER TANK IS FILLED.

IMPORTANT: Fill the water tank before energizing this unit:

- 1. Insert the brew chamber (empty) and place an EMPTY decanter in place under the brew chamber.
- 2. Connect unit to electric power. Four beeps will sound and all lights glow momentarily.
- 3. Be sure the brewer is "*OFF*" (if necessary, press ON/OFF key until no LEDs are lit).
- 4. Press BREW key three (3) times, then press CANCEL key once. BREW and HEAT indicators will flash while tank is filling.
- 5. When water starts to flow from the brew chamber, the tank is full. Press ON/OFF key once to terminate fill. Heating element will be energized and will begin heating water in preparation for the first brew. When the water has reached the proper temperature, the HEAT light will go out.

1016BVM OPERATION (continued)

WATER HEATER

Water temperature is sensed by an electronic water temperature probe inserted into the water tank. This temperature signal is fed to the controller.

The setpoint temperature is adjustable. The controller sends a command signal to the power board based upon a comparison between the setpoint temperature and actual temperature. See page 15.

The power board energizes the heating elements based on the command signal from the controller.

Excessive temperature will trip the hi-limit safety switch. When the brewer cools, remove front panel and press the red button on the hi-limit to reset.

WATER FLOW

AUTOMATIC OPERATION

Pressing the BREW key energizes the solenoid valve, allowing water from an external water supply to flow into the water tank. The incoming water forces heated water out of the tank to perform the brew.

The solenoid uses a flow control device so that flow is consistent between 20 p.s.i. and 90 p.s.i.

The length of time the solenoid is open is controlled by the time setting of the controller. See page 16.

After the solenoid closes, water will continue to flow to the brew chamber until water level in the tank falls below the brew pickup, breaking the siphon.

HOT WATER FAUCET

The faucet water coil is submerged in the hot water tank and draws heat from the brew water. Water going to the water coil is not controlled by the solenoid valve.

Hot water is provided at the faucet, at supply water pressure, any time the faucet shut-off valve is *OPEN*.

Fig. 4 Heat Control Diagram

Fig. 5 Water Flow Diagram

OPERATION (continued)

IMPORTANT:

DO NOT energize this brewer until the water tank has been filled. Dry firing will damage heating elements. See page 6.

Fig. 6 Turning Brewer ON or OFF

Fig. 7 Initiate a Brew

Fig 8. Brew Cancel

ELECTRONIC FEATURES

Energizing the Brewer

When electric power is applied to the unit, all the indicators will glow momentarily and four beeps will sound. The unit will be *OFF*.

Press the ON/OFF key. Five beeps will sound and the POWER indicator will remain *on*. If the water temperature is below setpoint, HEAT indicator will glow until water temperature reaches setpoint.

Press the ON/OFF key again to turn the brewer **OFF**. Four beeps will sound, the tank heater and all warmers will be switched off, and all indicator lights will go out.

Brew Settings

See pages 17 & 18 for setting Brew Time and Temperature.

ABS™ (Automatic Brew Start)

Start a brew by pressing BREW. A single beep will sound. The system will verify that the water in the tank is at the proper temperature. If it is, brew will start immediately. Otherwise, the BREW indicator will flash (Brew Waiting Mode) until the water reaches setpoint temperature, then the indicator will glow and brew will commence. If the main warmer is off, it will be energized automatically.

At the conclusion of the brew cycle, three beeps will sound.

NOTE: To override Brew Waiting Mode, press and hold the BREW key for 3 seconds while the BREW indicator is flashing. Brew will begin regardless of water temperature. To avoid under-temperature brews, this feature should only be used when setting brew volumes.

NOTE: Brew Waiting Mode (BREW indicator flashing) prevents multiple, unattended brews. While the BREW indicator is on or flashing, any additional strokes of the BREW key will be ignored (there will be a beep each time the key is pressed, however). Another brew cannot be initiated until the previous brew is complete.

The Brew Waiting Time, also called Dripout Time, (interval between when the brew is completed and the audible signal sounds at the end of the brew) may be adjusted between 2 and 8 minutes at the Brew Signal Timer dial on the controller. This allows all water in brew chamber to drip through as coffee. See page 18.

Brew Cancel

To cancel a brew in progress or a brew in waiting, press the CANCEL key. Two beeps will sound and the BREW indicator will go out.

NOTE: If a brew in progress is cancelled, coffee will continue to flow until all water delivered has dripped through the brew chamber.

Quality Timer

Coffee looses its freshness as it sits on a warmer. The Quality Timer flashes the warmer lights 30 minutes after the last brew to remind you that the coffee is nearing the end of its useful life.

After Hours[™] Operation

During normal operation, the controller will maintain the precise brewing temperature. If, however, if the BREW key in not pressed for 3 hours, the brewer goes into After Hours[™] mode; any warmer left on will be turned off; and, the temperature will only be maintained to within 20°F. This feature prolongs component life and saves energy.

As soon as the BREW key is pressed, the brewer returns to normal operation, heating the water to the precise temperature before beginning the brew. The brewer will return to After Hours[™] mode only if three hours pass without a brew being initiated.

Disable/Enable After Hours™ Feature

To disable After Hours[™], press the ON/OFF key to turn the brewer **OFF**. Press and hold the CANCEL key until two beeps sound, and the HEAT indicator flashes twice. This feature is now disabled.

To re-enable After HoursTM, press the ON/OFF key to turn the brewer *OFF*. Press and hold the CANCEL key until three beeps sound, and the POWER indicator flashes twice. This feature is now enabled, however, it will not be activated unless no brew is initiated for three hours.

Over-Temperature and Temperature Fault Protection

Should the water temperature exceed 214°F (101°C), or if the controller does not detect a 2°F (1°C) rise in temperature within four minutes of calling for heat, the brewer will go into Over Temperature Mode; the heating element is turned off, all warmers are disabled and all lights will flash.

Possible causes of Over Temperature condition:

- Setpoint is in the boiling range.
- Insufficient water volume to prevent water in tank from boiling during brew.
- Heating element or temperature probe has malfunctioned.
- Excessive scale buildup is preventing the element from heating the water.
- Heating element relay fails in the "on" state.
- No water in the tank.
- Hi-limit safety tripped (must be manually reset)

To reset the brewer:

- Determine the cause of the failure and take appropriate remedial action to rectify the problem.
- Press and hold the CANCEL key for six seconds. Five beeps will sound and brewer will resume normal operation.

After Hours[™] is an energy saving feature. The brewer will enter After Hours[™] mode if it is not used for three hours. Press the BREW key to immediately return the brewer to normal operation.

IMPORTANT:

If the original cause of the problem has not been addressed, the brewer will once again go into Over Temperature mode four minutes after being reset.

BREWING COFFEE

CAUTION: BURN HAZARD

Exposed surfaces of the brewer, brew chamber and decanter may be HOT to the touch, and can cause serious burns.

To avoid splashing or overflowing hot liquids, ALWAYS place an empty decanter under the brew chamber before starting the brew cycle. Failure to comply can cause serious burns.

After a brew cycle, brew chamber contents are HOT. Remove the brew chamber and dispose of used grounds with care. Failure to comply can cause serious burns.

NOTE: The brewer will not initiate a second automatic brew cycle until the current cycle plus the drip-out time is completed. If the *BREW* key is pressed during this time, the *BREW* light will flash, indicating a brew in progress.

NOTE: Water for the hot water faucet is heated in a coil inside of the water tank. Use of the faucet will not affect the volume of water delivered for a brew. However, overuse of the faucet during a brew may lower the temperature of the brew water.

A. PREPARATION

Place one (1) genuine Bloomfield paper filter in the brew chamber.

Add a pre-measured amount of fresh coffee grounds. Gently shake the brew chamber to level the bed of grounds.

Slide the brew chamber into place under the brew head.

B. AUTOMATIC OPERATION

BE sure HEAT light is not lit.

Place the appropriate *EMPTY* decanter in place under the brew chamber.

Press the BREW switch. The BREW light will glow and a beep will sound.

The solenoid will open for an amount of time determined by the timer setting, admitting a measured quantity of water into the tank.

Fig. 9 Prepare Brew Chamber

Fig. 10 Press BREW to Start

Inlet water will displace a like amount of heated water from the tank. The hot water will be forced into the brew head where it will spray over the bed of grounds. Freshly brewed coffee will begin to fill the container under the brew chamber.

At the end of the brew cycle, plus an amount of time set to allow all water to drip out of the brew chamber, three beeps will sound. When the flow and all dripping stops, the coffee is ready to serve.

Discard the contents of the brew chamber and rinse it in a sink. When the HEAT light goes out, the brewer is ready for another brew cycle.

C. WARMERS

At the start of a brew, the MAIN warmer is energized automatically. Press either the FRONT or REAR warmer switch to energize an auxiliary warmer. Set the filled decanter on the selected warmer to keep it warm.

Procedure is complete

TROUBLESHOOTING SUGGESTIONS

| SYMPTOM | POSSIBLE CAUSE | SUGGESTED REMEDY | |
|---|---|---|--|
| Water won't heat | Brewer unplugged or circuit breaker tripped | Check power supply cord Check / reset circuit breaker | |
| | Temperature adjusted too low or set to OFF. | Set to on and set for desired temperature. See page 15 | |
| | Hi-Limit safety switch tripped | Access hi-limit by removing front panel. Hi-limit is on the left side of the tank. Use an insulated tool to push the red button in until it "clicks" and stays. | |
| | Damaged internal component or wiring | Allow to cool Examine wiring & connectors, controller, power board and heat- ing element Repair/replace as needed | |
| Coffee level too high or low | Timer out of adjustment | Adjust controller. See page 16 | |
| | Too many filter papers or wrong filter paper | Use one (1) genuine Bloomfield filter per brew | |
| Brew chamber overflows | Brew chamber dispense hole plugged | Thoroughly clean brew chamber | |
| | Too much coffee or too fine a grind | Use correct grind and amount of coffee | |
| Sprays water from brew head | Spray gasket improperly installed | Check/reinstall gasket on INSIDE of brew head | |
| | Spray disk plugged or installed upside down | Clean spray disk and install with ears "up" | |
| No brew (faucet flows OK, water is up to temperature) | Damaged internal component or wiring | Check keypad, controller, power board & solenoid Repair, replace as needed | |
| No brew plus no flow from hot | Water supply OFF | Turn water supply ON | |
| water faucet | Solenoid inlet strainer plugged | Clean strainer | |
| | Water filter (if used) plugged | Replace filter element | |
| No flow from hot water faucet | Faucet valve turned OFF | Turn faucet valve ON | |
| | Faucet plugged | Disassemble faucet, clean | |
| Main warmer inoperative | Warmer Fuse blown | Check wiring for moisture Replace 10 amp fuse | |
| Poor coffee quality | Keep brewer and decanters clean. Install a taste and odor filter in water supply, and replace cartridges regularly. Use a quality coffee with a consistent roast. Use proper grind and amount of coffee per brew. | | |

The 1016BVM brewer is designed to perform a continuous internal diagnosis, and to signal faults by flashing all the lights. In fault mode, warmers, heating element and water fill solenoid are turned "off", and most keypad functions are disabled.

CAUTION SHOCK HAZARD

Live electrical circuits may be exposed while performing these procedures. These procedures are to be performed by qualified technical personnel only.

Error detection (all lights flashing) will occur under two conditions:

- Anytime a temperature in excess of 214°F is detected.
- Temperature does not change by at least 2°F within 4 minutes of tank heater being energized (HEAT light on).

To reset the brewer after the fault has been corrected, press and hold the CANCEL key for 3 seconds, or disconnect the brewer from electrical power for three seconds.

| WHAT TO CHECK | DESCRIPTION | CORRECTIVE ACTION |
|---|---|---|
| Has the water tank been properly filled? | On initial startup, an attempt to heat a dry tank will be detected as too high a temperature or insufficient temp rise, or will trip the high limit. | Tank must be properly filled as detailed on page 6. Check hi-limit (see below) |
| Has hi-limit safety thermostat tripped off? | Brewer may have been started without water in the tank, or the temp control thermostat may require adjustment. | Access hi-limit by removing front panel. Hi-limit is on the left side of the tank. Use an insulated tool to push the red button in until it "clicks" and stays. Reset per above. |
| Check control board and temp probe. | Brewer will go into error mode immediately if either the control board or temp probe is defective. Temp probe electrical resistance is approximately $30K\Omega$ at room temp, and $2K\Omega$ at boiling. Replace temp probe if less than $1K\Omega$. | Reset by holding the CANCEL key for 3 seconds. If lights continue to flash: Disconnect temp probe from control board. a. If lights continue to flash, unplug brewer and replace control board. b. If lights stop flashing, unplug brewer and replace temp probe. |
| Check power board and heating element. | Brewer will go into error mode 4 minutes after energizing the heating element if insufficient heat rise is detected. The heating element is energized by an electronic power board, and protected by the hi-limit safety. Heating element should receive full line voltage (i.e. 120V, 208V or 240V). Be sure the hi-limit safety is reset. | Reset by holding the CANCEL key for 3 seconds. If lights resume flashing after 4 minutes: Check the voltage across the heating element terminals: a. If no voltage is present, unplug brewer and replace power board. b. If proper voltage is present, unplug brewer and replace tank heating element. |
| Is the brew temperature properly adjusted? | The brewer may occasionally go into error mode if the brew temperature is set too high. | See page 17 for temperature adjustment procedure. |
| | | |

SERVICING INSTRUCTIONS

CAUTION SHOCK HAZARD

Opening access panels or removing warmer plates on this brew may expose uninsulated electrical components. Disconnect brewer from electrical power before removing any panel.

ACCESS PANELS

TOP PANEL:

Remove top panel to access hot water tank, thermo probe, heating elements, brew circuit tubing, faucet valve and piping.

Top panel is held by two screws at the front and a retaining lip at the rear.

FRONT PANEL:

Remove upper front panel to access controller, power board and solenoid.

Upper front panel is held by two screws at the bottom and a retaining lip at the top.

To remove lower front panel: Remove upper front panel, unscrew warmer plate, then remove two retaining clips.

SOLENOID DOOR:

Remove solenoid door to access solenoid plumbing connections.

Solenoid door is held by two screws and a retaining lip.

WARMER PLATES:

Warmer plates unscrew counterclockwise.

14

TEMPERATURE ADJUSTMENT

Place empty decanter under brew chamber. Energize brewer and allow unit to heat. When HEAT light goes out, press BREW key. Use a temperature probe with needle tip to read temperature of water stream as it exits brew chamber.

Fig. 13 Checking and Adjusting Brew Temperature

Adjust WATER TEMP dial on controller; clockwise increases temperature. Refer to Table 1 below for proper brewing temperature based on altitude.

Table 1 Boiling Temperature by Altitude

CAUTION BURN HAZARD

Brew water is extremely hot and can cause burns on contact. Hold probe with tip pointing down to avoid contacting hot water.

IMPORTANT:

Temperature setpoint cannot be changed during a brew. New settings will not be effective until end of brew.

NOTE: Optimum brewing temperature is $200^{\circ}F(93.3^{\circ}C)$ $\pm 5^{\circ}F(\pm 2.8C)$. Thermostat must be adjusted so that tank temperature does not exceed $205^{\circ}F(96^{\circ}C)$.

IMPORTANT:

An electronic temperature controller will maintain temperature within $\pm 2^{\circ}$ F. To prevent boiling water in the brewer, controller should be adjusted to a maximum temperature equal to the local boiling temperature minus 2° F, or 205° F, whichever is less.

IMPORTANT: Water pressure must be between 20 p.s.i and 90 p.s.i. flowing pressure. If water pressure exceeds this value, or if water pressure varies greatly, a pressure regulator must be installed in the water supply line.

DRIPOUT TIME _

Fig. 14 Adjust BrewTime and Dripout Time

IMPORTANT: Before setting assembly into tank, make sure tank lid gasket is properly seated on flange of lid.

IMPORTANT: When replacing temperature probe, be sure a new seal washer is in place around the probe. Tighten jamb lock nut only enough to ensure no water leakage. Excessive tightening is not necessary.

IMPORTANT: When replacing heating element, also replace seal gaskets.

BREW TIME ADJUSTMENT

The amount of water dispensed automatically during a brew cycle is controlled by the SOLENOID TIME dial of the controller.

Place empty decanter under brew chamber. Press BREW button. Brewer should dispense one full decanter of water. To adjust amount:

Remove brew chamber and button plug. On the controller, adjust SOLENOID TIME dial (BREW TIME); clockwise increases time. Run several cycles to check amount of water delivered.

DRIPOUT TIME ADJUSTMENT

Water delivered to the brew chamber will take a while to drip through as coffee. The time between the end of a brew and when a new brew can be initiated is controlled by the BREW SIGNAL TIMER. Adjust the BREW SIGNAL TIMER dial on the controller to account for the dripout time. Replace button plug.

REMOVE TANK LID ASSEMBLY

Unplug brewer or turn circuit breaker *OFF*. Turn *OFF* water supply. Remove top panel. Pull vent tube and inlet elbow out of basin pan.

On automatic models, pull water inlet tube out of basin pan. Remove basin pan.

On models with faucet, disconnect inlet pipe at faucet shut-off valve and outlet pipe at faucet.

Disconnect all wiring from hi-limit and heating element. Disconnect temperature probe from controller.

Loosen center screw on tank hold-down bracket. Remove hold-down bracket by sliding short slotted end off of locking stud and lifting it off. Remove cover assembly by lifting it straight up.

Reassemble in reverse order.

REPLACE TEMPERATURE PROBE

Unplug brewer or turn circuit breaker OFF. Remove top panel.

Loosen and free jam nut from pass-thru fitting securing temperature probe. Disconnect temperature probe wiring connector from controller.

Lift out probe, jamb nut and gasket.

Use a new seal washer. Reassemble in reverse order.

REPLACE HEATING ELEMENT

Remove tank lid assembly per above.

Remove two hex nuts holding element to cover. Pull element from mounting holes.

Reassemble in reverse order.

REPLACE SOLENOID

Unplug power cord. Turn *OFF* and disconnect water supply from brewer inlet fitting.

Remove front panel. Remove two screws holding access door in place. Remove access door and solenoid. Unscrew inlet fitting cap to release solenoid from door.

Remove wiring from solenoid.

Large end of wrench 86660 can be used to hold solenoid inlet fitting while disconnecting supply line.

REPLACE FAUCET SUPPLY HOSE

Unplug power cord. Turn *OFF* and disconnect water supply from brewer inlet fitting. Disconnect hose fitting from solenoid (See illustration at right).

Disconnect hose flare fitting from tank coil fitting.

REPLACE HOT WATER FAUCET COIL

(Symptom: Brewer drips continuously from brew head, except when faucet valve is turned OFF.)

IMPORTANT: When replacing water faucet coil, also replace seal gaskets.

Remove tank lid assembly per above.

Remove two hex nuts hot water coil to cover. Pull coil from mounting holes.

REPAIR HOT WATER FAUCET

Remove top panel and turn faucet valve OFF.

Unscrew aerator cap from faucet and remove handle retaining clip. Do not let faucet body turn.

Pull bonnet assembly from faucet body.

Examine the interior of the faucet body and the surface of the seat cup. Clean out any debris in the faucet body, using a stiff bristle brush if necessary.

NOTE: Any abrasion or roughness on the flat end of the seat cup will require replacing the seat cup:

Work the seat cup out of the bonnet and off of the end of the stem.

Install a new seat cup, making sure the knob on the stem is fully inserted into the pocket of the seat cup, and the skirt of the seat cup is fully inserted into the bonnet.

Examine the aerator. Clean any debris from the screen or flow straightener, using a stiff bristle brush if necessary.

RESET HI-LIMIT

Allow brewer to cool. Remove front panel.

Press red button on hi-limit until it clicks and stays in.

Reassemble in reverse order. Test for function and proper operation.

REPLACE CONTROLLER

Unplug power cord OFF.

Remove front panel. Remove timer faceplate. Use needle nose pliers to disengage three barbed fittings holding controller to bracket. Disconnect keypad ribbon cable (note position "1"), temperature probe and power board cable.

Reassemble in reverse order. Set jumpers as described below.

Adjust controller as described on page 15 & 16.

SET CONTROLLER JUMPERS

Slide jumper over both pins of V1 to set VALVE TIME range at 60 - 180 seconds.

Remove jumper from V1 to set VALVE TIME range at 120 - 250 seconds.

REPLACE KEYPAD

Unplug power cord. Shut off water supply valve. Remove top and front panels. Remove faucet.

Disconnect ribbon cable from controller. Pry faceplate/keypad from body. Remove all adhesive residue.

Remove protective backing from adhesive on new keypad. Slide ribbon cable into slot on body from the outside, then carefully apply keypad to face of body.

Ribbon cable connects to P2 on controller. Note locator marking "1" on connector and cable.

Reassemble in reverse order. Test new keypad for function and proper operation.

Fig. 17 Controller Hook-Up

Fig. 18 Keypad Ribbon Cable Hook-Up

REPLACE POWER BOARD

Unplug power cord or turn circuit breaker OFF. Shut off water supply valve. Remove front panel. Remove water tank lid (see page 16), then pull tank from cabinet to allow access to board.

Note position of wires at power board, then remove wires. Suggestion: Marking these wires is highly recommended to ease reinstallation.

Remove screws holding power board to cabinet. Remove power board from cabinet.

Reassemble in reverse order. Test for leaks, function and proper operation.

CAUTION -CHEMICAL BURN HAZARD

Deliming chemicals are caustic. Wear appropriate protective gloves and goggles during this procedure.

Never siphon deliming chemicals or solutions by mouth.

This operation should only be performed by qualified and experienced service personnel.

IMPORTANT: DO NOT spill, splash or pour water or deliming solution into or over any internal component other than the inside of the water tank.

IMPORTANT: DO NOT allow any internal components to come into contact with the deliming solution. Take care to keep all internal components dry.

NOTE: Repeat steps 4 thru 5 as required to remove all scale and lime build-up.

| PROCEDURE: | Delime the Water Tank |
|--------------|---|
| PRECAUTIONS: | Disconnect brewer from electric power. Allow brewer to cool. |
| FREQUENCY: | As required (Brewer slow to heat) |
| TOOLS: | Deliming Solution Protective Gloves, Goggles & Apron Mild Detergent, Clean Soft Cloth or Sponge Bristle Brush, Bottle Brush Large Sink (or other appropriate work area) |

- 1. Unplug power cord. Turn off the water shut-off valve and disconnect the water supply line from the brewer inlet fitting.
- 2. Remove the tank lid assembly as described on page 16.
- 3. Remove the water tank from the brewer body by lifting straight up. Empty all water from the tank. Set the tank back into the brewer.
- 4. Mix 2 quarts of deliming solution according to the manufacturer's directions. Carefully pour the deliming solution into the water tank. Lower the lid assembly back onto the tank. Allow to sit for 30 minutes, or as directed by the manufacturer.
- 5. At end of soaking period, remove lid assembly from tank. Thoroughly rinse internal components of lid assembly with clear water. Using a stiff bristle brush, scrub the heating element and faucet water coil to remove lime and calcium build-up. Rinse with clean water. Store lid assembly in a safe location.
- 6. Remove the tank from the brewer and empty. Using a stiff bristle brush, scrub the interior of the water tank to remove lime and calcium build-up. Rinse with clean water.

- 7. Set the tank back into the brewer. Reassemble the tank lid to the water tank. Make sure the gasket is properly in place, then reinstall lid clamps.
- 8. Reinstall wiring to heating element and thermostat. Reassemble piping for the faucet. Verify that all internal components are dry, then reinstall the top panel.
- 10. Reconnect brewer to electrical supply and reconnect water supply.
- 11. Install the brew chamber without filter paper or grounds. Run at least three full brew cycles and discard all water generated.
- 12. Brewer is ready to use.

NOTE: Normally, silicone hoses do not need to be delimed. Should deliming hoses become necessary, Bloomfield recommends replacing the hoses.
