Heated holding cabinet Institutional

MODEL **HHC-906** full-size

Heated Holding Cabinet model HHC-906 with dual doors. Extra width, depth and racking options for institutional kitchens.

General Information

Henny Penny heated holding cabinets are designed to hold a wide range of cooked foods at safe temperatures for long periods of time prior to serving.

The 900 series holding cabinets were originally developed to hold large quantities of pressure-fried chicken for long periods of time without sacrificing freshness or presentation. Dual fans, ventilated side racks allow hot, moist air to circulate evenly throughout the cabinet and keep practically any menu item hot and tasty until serving. And that translates into higher food quality and less waste throughout the day.

Henny Penny holding cabinets also improve your equipment and labor utilization. With longer holding periods, operators can cook in

quantity before peak periods and stock heated display cases directly from the holding cabinet.

The HHC-906 is a full size, high volume, mobile heated holding cabinet with dual doors and a single control panel. Institutional sizes are wider and deeper than standard holding cabinets to handle different pan orientations and sizes common in institutional kitchens. Several racking configurations are also available.

Additional standard features such as stainless steel construction, fully insulated doors and cabinet walls, self-closing doors help protect food quality, reduce waste and provide for more efficient workflow.

Standard Features

- Durable, high-quality stainless steel construction, interior and exterior.
- Precise thermostatic controls and dial thermometer.
- Easy to see ON/OFF and cycle temperature lights.
- New standard adjustable racking system increases capacity and pan variety.
