GAS: Each unit has a 1-1/4" front gas manifold that couples to the adjacent sectional unit(s), and can be ordered with a 1" rear gas connection with a male NPT connector. Minimum supply pressure is 7" W.C. for natural gas, 11" W.C. for propane. An external pressure regulator and shut off valve must be provided. If using a flexible-hose gas connection, the I.D. of the hose must not be smaller than the connector on the unit and must comply with ANSI Z21.69. Provide an adequate means of restraint to prevent undue strain on the gas connection.

ELECTRICITY: Convection ovens models with optional electronic ignition require 50 Hz or 60 Hz single-phase power. 120V models have a 7 foot power cord with ground plug (1.0 amp for "D" models and 4.8 amp for "A" models). 208/240 V models have a terminal block for connection to a single-phase 208/240 V source (1.0 amp for "D" models and 2.6 amp for "A" models).

FLUE EXHAUST: Installation under a vented hood is recommended.

OTHER TECHNICAL INFORMATION

Exterior surfaces are 430 stainless steel #3 polish, except the back is aluminized steel.

Each 12" section has a separate control knob located on the front panel. On oven models, a gas valve for the oven is located on the front panel above the oven. The oven control panel is located to the left of the oven door and includes an on-off switch, indicator light, thermostat knob, and (on convection ovens) a speed selector switch for the blower motor. The fan motor for convection ovens is 1/2 hp, 2-speed, 1725/1140 rpm, with overload protection. Check local codes for fire and sanitary regulations.
