liquid coffee concentrate with*

BUNN Liquid Coffee Dispensers

The Liquid Coffee Ambient (LCA-2) dispenser's insulated storage compartment helps maintain product freshness by guarding against high temperatures. The coffee's flavor profile can be extended further with the chilled storage compartment featured in the Liquid Coffee Refrigerated dispenser (LCR-2).

New models added to the liquid coffee equipment line include the LCA-2 Iced Coffee (IC) and LCA-2 Low Profile (LP) dispensers. Expand your beverage offering into the growing specialty iced coffee category with the LCA-2 IC. For lower volume hot coffee accounts, BUNN offers the affordable LCA-2 LP with its shorter profile and 125 cup per hour serving capacity.
