Humidified holding cabinet

Countertop

MODEL **HCH-932** two-drawer
HCH-930 three-drawer

Heated Holding Cabinet, humidified countertop Model HCH-930 shown with electro-mechanical controls.

General Information

Henny Penny humidified holding cabinets are designed to hold a wide range of cooked foods at safe temperatures for long periods of time prior to serving without sacrificing freshness or presentation.

The 930 series space-saving countertop holding cabinets provide separate environments to keep popular items handy for immediate service.

With longer holding periods, operators can cook ahead of time and serve on demand during peak periods. Countertop design makes items accessible for servers without interrupting work flow.

Humidified environment allows you to hold a wide variety of items,

including baked potatoes, breakfast sandwiches and other items that dry out easily. Automatic water fill and level control are standard.

Units are welded stainless steel. Drawers and liners are single piece welded stainless steel construction and roll smoothly on tough Rulon slide bearings. Drawers close completely and seal against high-temperature gaskets.

Cabinets are fully insulated for energy efficient operation.

Control panel features easy-to-read temperature dial and indicator lights for power, heat, and water.

Standard Features

- Durable, welded stainless steel construction.
- Single piece welded drawer and liner.
- Fully insulated cabinet.
- Snug-fitting drawers on tough, low-friction Rulon bearings.
