## Warranty

Silver King warrants to the original purchaser of Silver King refrigerated equipment that the equipment shall be free from defects in material and workmanship under normal use and service as outlined in the Technical Manual. This limited warranty shall apply for a period of two (2) years from the date of original purchase. The Compressor will carry an additional three (3) year warranty. All warranties are subject to specific limitations outlined below.

This limited warranty does not apply to repair or replacement required as a result of carelessness, neglect and/or abuse, including improper installation, incorrect voltage supply, tampering with or altering components and/or equipment or failure to perform proper maintenance. Equipment damaged in transit, by fire, flood or an act of God is not covered. This limited warranty does not include freight, handling, installation, labor (following the two (2) year labor warranty period) or other incidental or consequential costs including product and/or economic loss. This limited warranty is in lieu of all other warranties, express or implied, including those of merchantability, and is non-transferable.

Specific provisions of this limited warranty are as follows:

### **Two (2) Year Parts Warranty**

Silver King warrants to the original purchaser of new Silver King equipment that such equipment and all parts thereof will be free of defects in material and workmanship, under normal use and service, for a period of two (2) years from the date of original purchase or 25 months from the date of shipment from the factory, whichever comes first, subject to all terms and conditions herein.

This warranty is limited to repairing or replacing any parts that, at Silver King's discretion, are deemed to be defective within the time period covered by this warranty. The warranty does not cover freight or handling charges incurred to replace such parts. Use of non-OEM parts may, at Silver King's discretion, void this warranty. If approved, warranty credit for non-OEM parts will be issued at the OEM cost.

Replacement parts sold separately are warranted for 90-days from date of purchase.

### **Five (5) Year Compressor Warranty**

Silver King warrants to the original purchaser for a period of five (5) years from the date of original purchase or five (5) years and one (1) month from the date of shipment from the factory, whichever comes first, that it will replace the compressor with one of similar design and capacity, exclusive of delivery and installation charges, if it is found to Silver King's satisfaction to be inefficient or inoperative due to defects in material or factory workmanship. It is the owner's responsibility to return the serial plate of the defective compressor or at Silver King's option the complete compressor, to the factory. Failure to do so will void the warranty.

### **Two (2) Year Labor Warranty**

Silver King warrants to the original purchaser for a period of two (2) years from the date of purchase or 25 months from the date of shipment from the factory, whichever comes first, a limited service labor warranty on Silver King refrigerated equipment subject to the following terms;

A factory issued Service Authorization Number must be obtained prior to work being performed under the labor warranty. Call your supplier or Silver King. Claims submitted without a Service Authorization Number will be paid at Silver King's discretion.

The labor warranty includes standard straight time labor charges in accordance with Silver King's Labor Warranty Guidelines and reasonable travel time, as determined by Silver King.

The warranty does not cover original installation, startup, normal adjustments or maintenance. Normal adjustments and maintenance include, but are not limited to; temperature control adjustments, temperature indicator calibrations, coil and filter cleaning, condensate drain cleaning.

A second service call for a related failure is not covered.

Use of refrigerants other than specified on the equipment serial plate voids the warranty.

All claims must include; model and serial number of equipment, date of purchase, date of failure, and a copy of the service invoice detailing the defect and service performed. No claim will be processed without this information. All claims must be filed within 60 days from date of service.

---

## Introduction

The SKMCD1P Cream Dispenser is designed to hold and dispense bulk coffee cream. It will dispense three portion sizes – 1 cream packet, 2 cream packets, or 3 cream packets.

---

## Setup

### Legs

The dispenser is shipped without legs attached. To install them, carefully tilt the unit and thread the legs into the four corner holes on the bottom of the dispenser.

### Drip Tray

The Drip Tray and Drip Tray Cover are installed as shown.

### Location

When locating your cream dispenser, convenience and accessibility are important considerations, but the following factors must be observed:

- When placing the unit on a counter, the counter must be able to support a minimum of 100 pounds.
- When placed on a counter, the unit must be on the feet supplied. If the feet are removed the unit will not operate properly and the warranty will be void.
- There must be at least two inches of space above, on the sides and behind the unit and open in front.
- Correct serving height is important so that it can be operated properly.
- The unit must be level. The feet are adjustable to aid in leveling the unit.
- Avoid placing the unit next to an oven, heating element or hot air source which would affect the performance of the unit.

### Electrical Connections

Be sure to check the data plate, located on the liner of the cabinet, for required voltage prior to connecting the unit to power. The specifications on the data plate supersede any future discussion.

The standard dispenser is equipped with a seven (7) foot power cord that requires a 115 Volt, 60 Cycle, 1 Phase properly grounded electrical receptacle protected with a 15 or 20 ampere fuse or breaker. The power cord comes with a 3 prong plug for grounding purposes. Any attempt to cut off the grounding spike or to connect to an ungrounded adapter plug will void the warranty, terminate the manufacturer's responsibility and could result in serious injury.

---

## Safety

### Risk of Electric Shock

- **Always be sure to unplug the power cord before servicing the dispenser or removing the back panel or front apron to avoid electric shock.**
- Dispenser must be plugged into a 3 prong plug for grounding. Cutting off the grounding spike on the power cord could result in electric shock to the operator during operation.
- Dispenser must be plugged into a 15 or 20 ampere fuse or breaker. Use of a larger fuse or breaker could result in damage to the dispenser and electric shock to the operator.

### Moving and/or Hot Parts

- Be sure to unplug the power cord before servicing the dispenser or removing the back panel or front apron to avoid contact with moving and/or hot parts.
- Some parts may remain hot even after being unplugged. Use caution when servicing.

### Back Injury

- Assistance should be utilized when moving this piece of equipment
- Be sure to lift with your legs and not your back when lifting the dispenser.

---

## Operation

### Initial Startup

After satisfying the installation requirements, the cream dispenser is ready to start. The unit will start when the power cord is connected to a live electrical receptacle. This can be verified by checking the indicator panel on the front of the unit. The indicator should display the current unit temperature. If the unit does not start when the power cord is plugged in, make sure that the switch on the back of the unit is in the 'on' position. Allow the unit to run a minimum of two hours before loading it with product. **It is completely normal for the exterior of the unit to feel warm while it is running.**

### Indicator Panel

The Indicator Panel contains a digital LED display that reads the product temperature during normal operation. The three lower buttons on the Indicator Panel are for selecting portion sizes (small or large). The upper button is used to reset the computer whenever the cream is refilled. **This button must be pressed each time the cream is refilled. Press and hold the REFILL button for 3 seconds until the indicator flashes 00.**

### Preparation for Use

Once the unit has achieved proper operating temperature, observe the procedures noted in the label on the door liner for loading cream into the cream dispenser. When removing an empty bag of cream, be sure to push the Valve Slide in fully before pulling the Dispensing Tube out of the valve. It may be easier to remove or install the Dispensing Tube in the valve by removing the Valve Insert first then removing or installing the Cream Container. The end of the tube may need to be cleaned daily with a clean cloth to prevent buildup which could affect the dispensing of product. **After loading the creamer, press and hold the REFILL button for 3 seconds until the indicator flashes 00.**

## Cleaning and Refilling Procedures

### Removing Valve Insert

To remove the valve insert once the beverage container is empty, simply press on the valve slide and remove the valve insert by pulling it straight up.

### Cleaning

Once removed, the valve can be cleaned with a brush and warm soapy water or in a dishwasher. The valve area in the dispenser should also be cleaned with a brush and warm soapy water.

### Insert New Bag into Container

Insert a new beverage bag into the container as shown. Lock the tube into place at the bottom of the container.

---

## Cleaning and Refilling Procedures

### Install Container and Bag

Place container inside cabinet and guide tube through valve area. Be sure the tube is straight and centered to avoid kinking, which could result in reduced product flow or leaking.

### Install Valve Insert

Push and hold valve slide while inserting the valve insert from above.

### Cut Tube

Cut the tube one inch below the valve.

### Press REFILL Button

Press and hold the REFILL button for 3 seconds (display 00) to alert the dispenser that a new beverage bag has been installed.

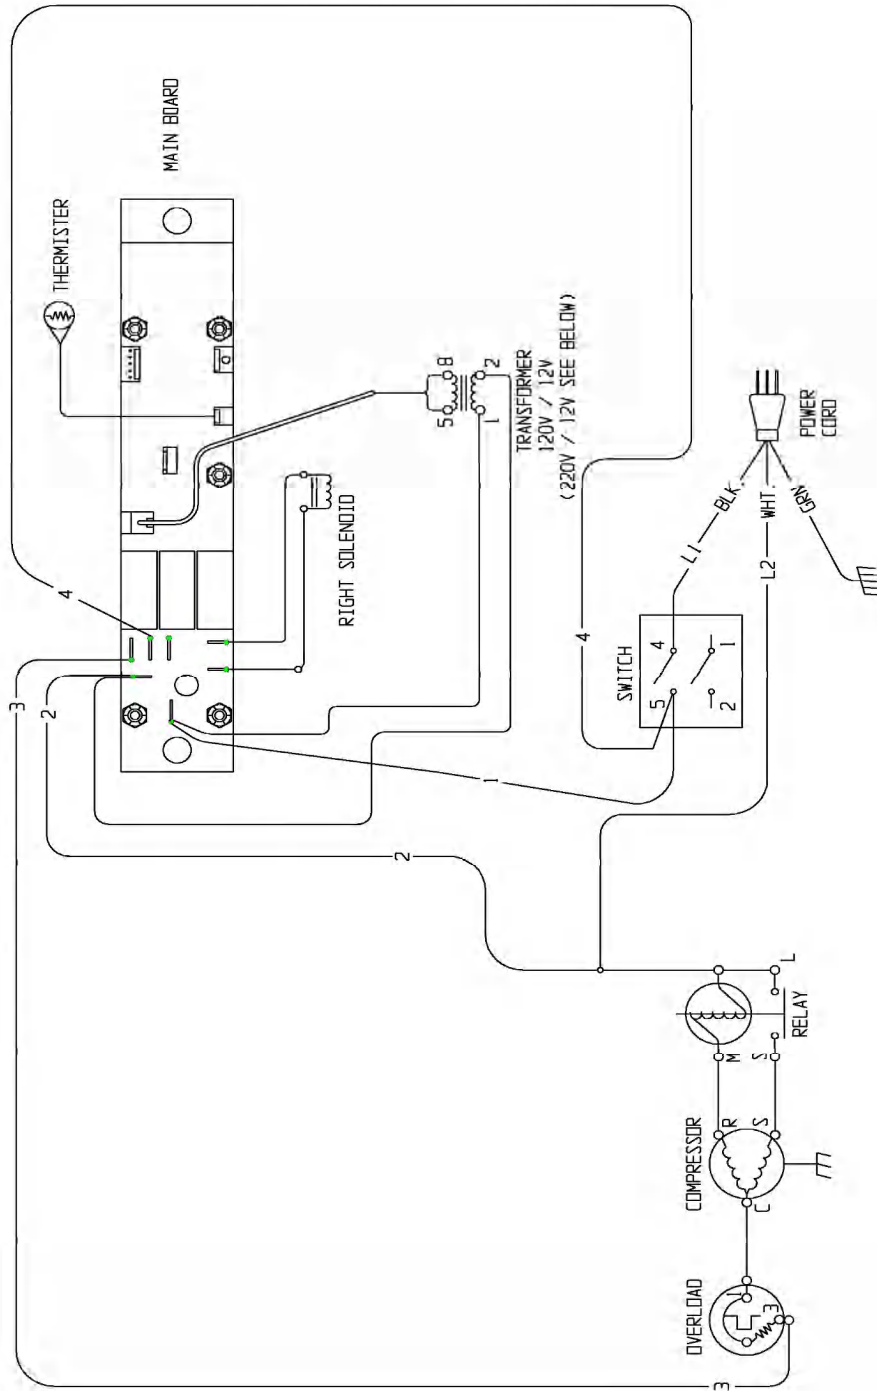

## Troubleshooting Guide

Complaint	Cause	Solution
Compressor will not run	<ol style="list-style-type: none"> <li>1. No voltage at wall receptacle</li> <li>2. Service cord pulled out of wall receptacle</li> <li>3.
