**HOT DOG CHROME ROLLER GRILL
MODELS 12, 25, 25X, 40, 45, 45X and 75**

**HOT DOG SILVERSTONE ROLLER GRILL
MODELS 12S, 25S, 25SX, 40S, 45S, 45SX and 75S**

Model 25

CAUTION

This equipment is designed and sold for commercial use only by personnel trained and experienced in its operation and is not sold for consumer use in and around the home nor for use directly by the general public in food service locations. For equipment to be used by the general public, please contact the factory.

INSTALLATION:

This grill is equipped for the voltage shown on the nameplate. It will operate on alternating current only, however, the correct voltage must be applied.

CAUTION

DO NOT CONNECT TO DIRECT CURRENT (DC).

Connection Load:

Model 12, 12S 120V	-610 Watts
Model 12, 12S 230CE-	- 530 Watts
Model 25, 25S, 25SX, 25X-	1196 Watts
Model 40, 40S	- 1636 Watts
Model 45, 45S, 45SX, 45X-	1696 Watts
Model 75, 75S	-2656 Watts

The grill should be connected to a wall type receptacle, a direct line or separate circuit. A direct line or separate circuit is preferred. If the grill is connected on a line already overloaded, it will not operate properly. When installed, the unit should be level. Optional 4 inch adjustable legs are available.

GENERAL OPERATING PROCEDURES

For flexibility, all models of roller grills, excluding the 12, are divided into two independently controlled heat sections. The right control knob controls the rear cooking section and the left control knob controls the front cooking section. The 12 and 12S grills have only one heating section.

A signal light is provided next to each control knob to give a visual check if one or both sections are turned on.

Each section is controlled by means of a rotary switch with positions marked at OFF-HIGH-MEDIUM and LOW. On MEDIUM for all models except the 12 and 12S 230CE, it is normal for every other roller to be unheated. The 12 and 12S 230CE uses an infinite control which varies heat on all rollers.

Before cooking for the first time, wash all rollers with mild detergent solution and then wipe with a clean wet cloth.

Hot dogs should be kept refrigerated until ready for use. Always use hot dogs or sausages made for grilling.

NSF requires that perishable foods be kept at 140° F or above during serving periods. Do not keep hot dogs on the LOW setting for more than two hours. If held for more than two hours they must be transferred to HIGH or MEDIUM heated zone for cooking and serving.

CAUTION

USE ONLY PLASTIC OR COATED UTENSILS FOR HANDLING THE HOT DOGS. METAL WILL SCRATCH THE ROLLERS. WHEN COOKING, DO NOT TRANSFER HOT DOGS FROM HIGH TO LOW AS THEY MAY SHRINK. DO NOT OPERATE GRILL WITHOUT GREASE PAN IN PLACE.

Cooking time will vary depending on starting temperature and quality of the product. For best results follow the cooking systems shown below.

1. Busy periods - Set both controls on HIGH and fill to capacity.
2. Medium periods - Set control to HIGH to cook hot dogs. Reduce heat to MEDIUM as needed.
3. For all models except the I2 and I2S 230CE preheat hot dogs on LOW. Medium is used for preheating the I2 and I2S 230CE. Turn heat to HIGH for cooking as needed.

CLEANING:

Remove all hot dogs. Turn control to HIGH and allow rollers to get hot. Clean rollers with a clean wet cloth. Wipe from the outside ends towards the center of the rollers. Do not force grease into the roller end bearings.

Turn the grill off and remove the grease tray by pulling forward on the front edge. Clean the entire unit daily to insure long life and satisfactory performance as well as to maintain an attractive appearance. The exterior should be kept bright and attractive by using a mild detergent or non-abrasive cleaner.

CAUTION

DO NOT USE SHARP EDGES ON SILVERSTONE COATING - SCRAPES WILL VOID THE WARRANTY. NEVER USE STEEL WOOL OR ABRASIVE CLEANERS TO CLEAN ROLLERS AS THIS WILL DAMAGE THE FINISH AND POSSIBLY DAMAGE THE BEARINGS.

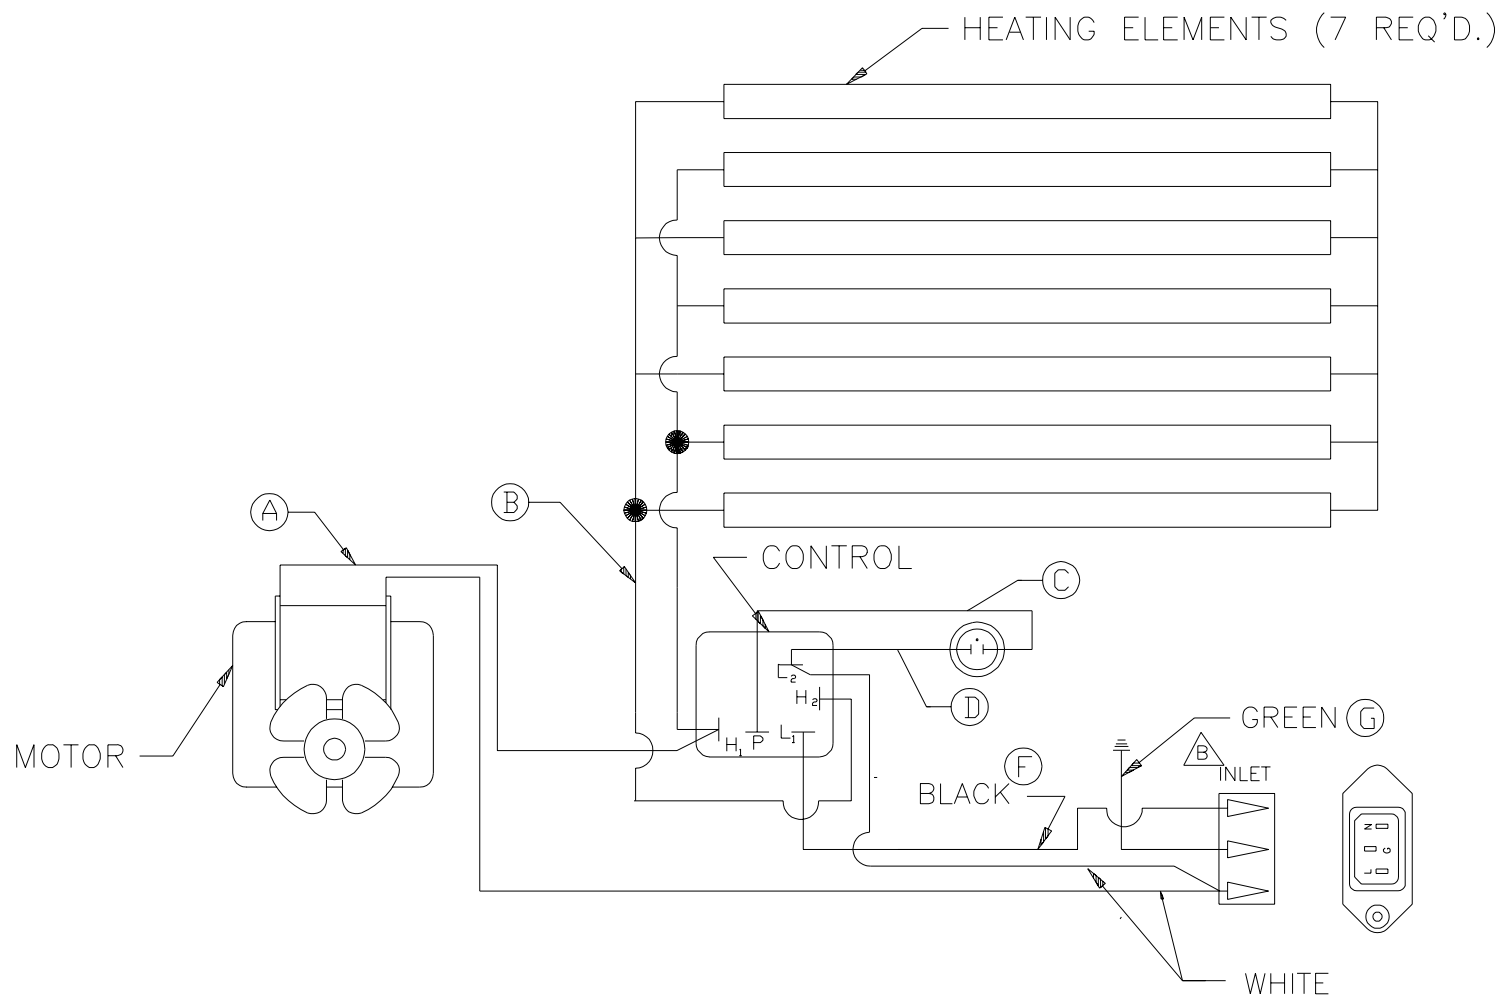

MAINTENANCE AND REPAIRS

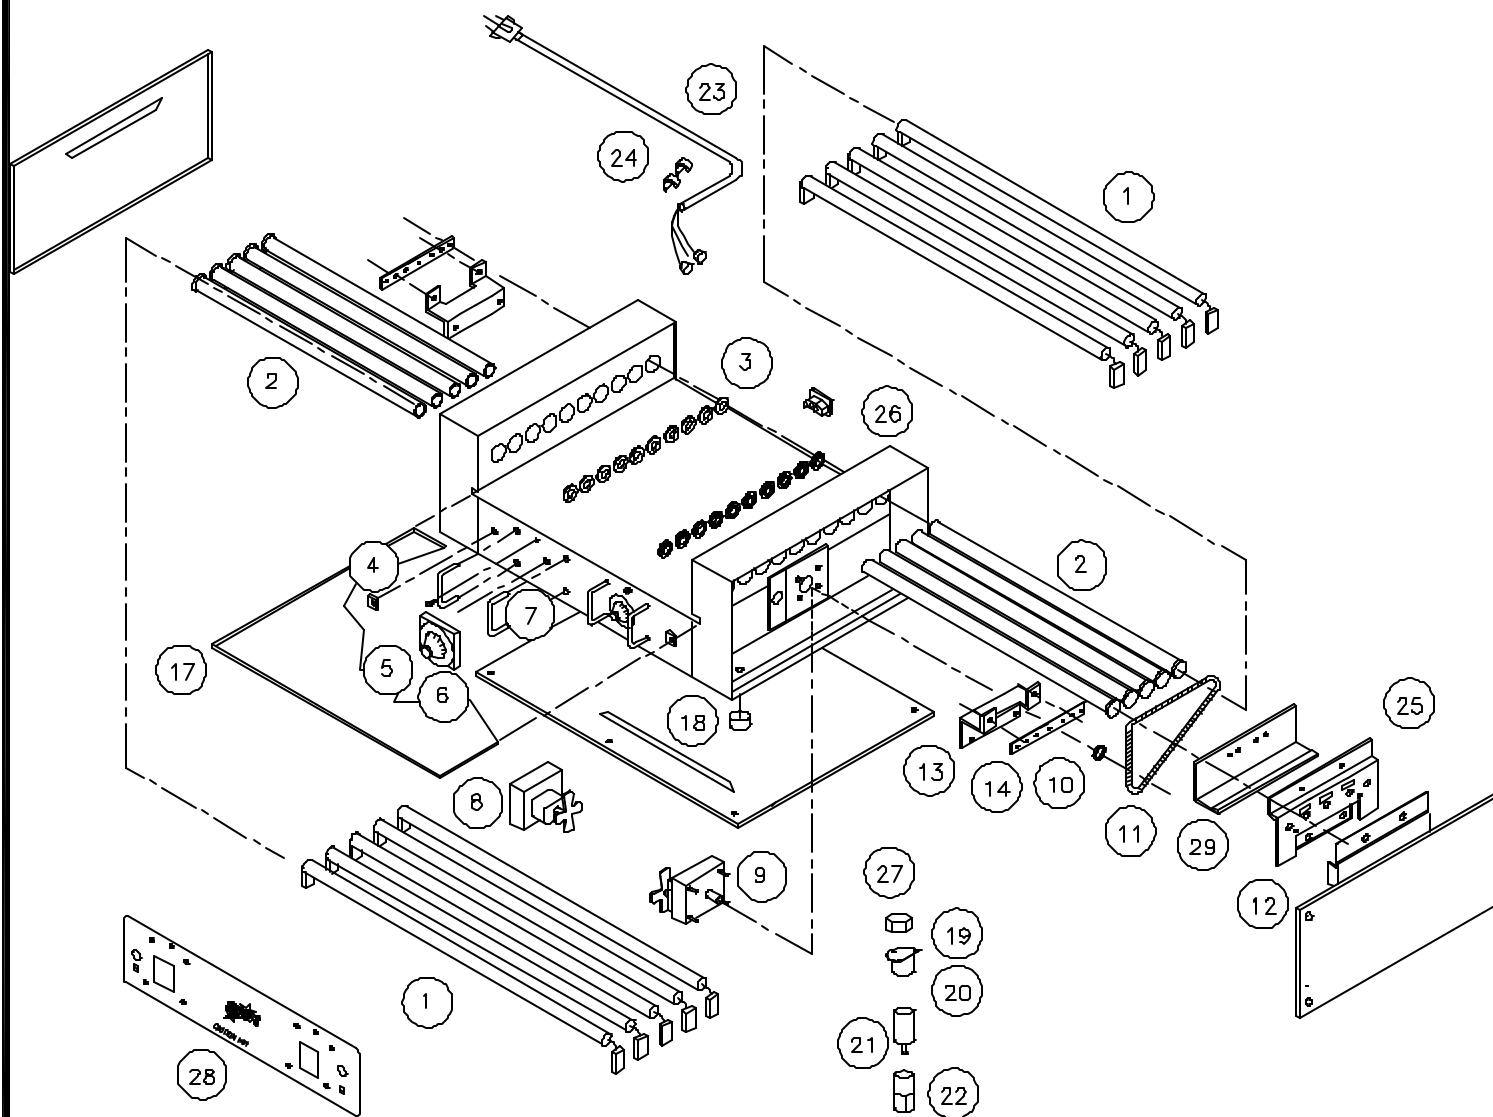

Contact the factory, a service representative or a local service company for service or required maintenance.
